

A close look at exported object positions

24M_TDP43-Pfkp_tight · job 5000

Rectangles = exported bounding boxes; marks = their midpoints

Automatic view: nearest PLA object to the center of the highest-count 1000-unit bin.

Window: 150 × 150 exported coordinate units, centered at (31495.5, 587.5). 52 intersecting boxes shown.

Coordinate reconstruction; not a microscopy image. Boxes are not cell outlines or segmentation masks.

Some boxes have zero width or height; midpoint marks keep these exported objects visible. No rows were sampled.
