

22F · Pfkp · job 5403: native-coordinate reconstruction

All objects contribute. Fine bins: 50 units; fraction bins: 1000 units. Supported bins cover 97.8% of PLA detections. Gray fraction bins have too few PLA objects; white bins have none. Count scales are shared across the 12 sections; support scale is local. Coordinates are box midpoints in export units. No microscopy pixels, tissue contours, smoothing, physical scale or anatomical registration are inferred.
